

# Learning Journal 2.5

1. Django static files are elements like HTML, CSS and images that are served directly to users without any processing by the Django server. They mostly contribute to the applications appearance, behaviour or functionality.

There are different ways Django handles them, one of them is through the “settings.py” file, here we define settings related to them. It includes the base URL for serving files ‘STATIC\_URL’.

2.

Package	Description
<i>ListView</i>	Class-based view where a list of objects are displayed from a specified model and renders them using a specified template
<i>DetailView</i>	Class-based view where specifications of a single object is rendered, it also uses a specified template

3. There have been many occasions where I have to do research, stop and think for a moment in order to resolve an issue or debug, I think these are crucial moments that will help me deepen my knowledge on Python and its frameworks. I am proud of what I have accomplished in such small time, this makes me want to learn even more about what else I can do with Python.
